

MINH HIEU LUONG

AI Software Engineer · Full-stack AI Engineer

PERSONAL DETAILS

Full name	Minh Hieu Luong
Designation	AI Software Engineer / Full-stack AI Engineer
Date of birth	August 12, 1998
Email	minhhieudn98@gmail.com
Phone	(+84) 399 870 055
Address	H15/03 K408 Hoang Dieu, Binh Thuan Ward, Hai Chau District, Da Nang City, Vietnam
Website	hieulm.codeandcafe.com
LinkedIn	linkedin.com/in/minhhieudn98

PROFILE

- Software engineer with 6 years building enterprise systems, now focused on applied AI: designing and shipping AI-powered features inside production platforms rather than training models in isolation. Most recently built the AI features of an intellectual-property management platform — OCR document processing, image similarity search, and a risk-prediction service that scores how likely a product is to be copied and explains the reason behind each score — delivered as enterprise FastAPI APIs on Azure Kubernetes Service.
- Applied AI: risk scoring and prediction, machine learning (logistic regression), model accuracy testing, explainable results, fuzzy text matching, OCR document processing, image similarity search.
- Languages and frameworks: C#, ASP.NET, ASP.NET MVC, ASP.NET Web API, ASP.NET Core, .NET 8/10, JavaScript, TypeScript, Python, HTML, CSS, jQuery, AJAX.
- Backend and AI serving: FastAPI, Flask, async REST APIs, Entity Framework, Docker, Kubernetes, microservices.
- Front-end: React, Next.js, React Flow, Vue.js, Angular, DevExtreme, Redux, NgRx, Xamarin.
- Databases: MS SQL Server, PostgreSQL, MySQL, Redis, LINQ.
- Azure: Kubernetes Service (AKS), Functions, Data Factory, DevOps and CI/CD pipelines. Migrated production workloads from AWS to Azure.

PERSONAL QUALIFICATION

- Take ownership of features from design through delivery.
- Strong interest in research, programming and system design.
- Work effectively both in a team and independently.
- Good at problem-solving and production troubleshooting.
- Able to communicate and work directly with US and Japanese clients in English.
- Willing to learn and adopt new technologies.
- Hard-working with a high sense of responsibility.

EDUCATION

- Duy Tan University, Da Nang, Vietnam – Bachelor of Software Engineering, 2020.

EXPERIENCE

AI Software Engineer · Hypertek (secondment from FPT Software) · 04/2026 – 07/2026

- Programming: Python, FastAPI, NumPy, TypeScript, React, Next.js, React Flow
- Cloud: Azure Kubernetes Service (AKS), Docker, GitLab CI
- Database: PostgreSQL

.NET Developer / Full-stack Developer · FPT Software, Da Nang · 04/2021 – Present

- Programming: C#, ASP.NET MVC, .NET Core, .NET 8 API, .NET 10 MVC, JavaScript, TypeScript, Python, Vue.js, Angular, DevExtreme
- Cloud: Azure Data Factory, Azure Functions, Azure DevOps, CI/CD pipelines, AWS to Azure migration
- Database: MS SQL Server, LINQ

Developer · Ugotechs, Da Nang · 06/2020 – 03/2021

- Programming: C#, Xamarin.Android, .NET Framework 4.8, ASP.NET MVC
- Database: MS SQL Server

PROJECTS

Project	IPMS – Intellectual Property Management System
Company	Hypertek
Position	AI Software Engineer
Team size	8
Duration	4 months
Description	AI-powered enterprise platform for the intellectual property lifecycle: trademarks, patents, industrial designs and geographical indications. Designed and built the AI layer: an OCR document-processing pipeline extracting structured data from IP filings; image similarity search for trademark and industrial-design comparison; and a risk-prediction service that scores each filing High, Medium or Low for infringement risk. It checks five things — brand history, past disputes, location, industry trend and forecast — and shows the reason for each one in Vietnamese and English, so the legal team can audit any decision. Added a machine-learning model (logistic regression) that learns better scoring from past cases; it only goes live once it beats the existing scoring on accuracy tests, and the system falls back to the original score if anything fails. Exposed these capabilities as enterprise FastAPI endpoints consumed by the registration and approval workflows, backed by PostgreSQL (pg_trgm, materialized views) and deployed on Azure Kubernetes

	Service. The platform also covers registration and approval workflows, document management, fee calculation, domain-name management, and automated crawling of external registries such as WIPO.
Technology	Python, FastAPI, NumPy, OCR, image similarity search, machine learning (logistic regression), TypeScript, React, Next.js, React Flow, PostgreSQL (pg_trgm, materialized views), Docker, Azure Kubernetes Service (AKS), GitLab CI, Jira

Project	Legacy Insurance System Modernization – Japan (NDA)
Company	FPT Software
Client	Japan
Position	Software Engineer
Team size	180
Duration	4 months
Description	Migrated legacy Microsoft Access business applications to a centralized .NET 10 MVC architecture for a Japanese agricultural and livestock insurer, working within a 180-engineer modernization program and clarifying legacy business rules directly with Japanese stakeholders in English.
Technology	C#, .NET 10 MVC, SQL Server (SSMS), Visual Studio 2022, GitLab, TortoiseSVN

Project	Healthcare Patient-Outreach Platform – U.S. (NDA)
Company	FPT Software
Client	United States
Position	Software Engineer & Data Engineer
Team size	10
Duration	6 months
Description	Built automated patient-outreach and care-data pipelines on Azure Data Factory and Azure Functions for a US healthcare platform, and developed the .NET Core / Angular application layer over the same pipelines to support day-to-day operational workflows.
Technology	C#, TypeScript, .NET Core, Angular, Azure Data Factory, Azure Functions, Azure Cloud Services, SSMS, Visual Studio 2022, Azure Repos

Project	US Real-Estate Document Notarization (NDA)
Company	FPT Software
Client	United States
Position	Software Engineer
Team size	47
Duration	3.5 years
Description	Delivered features end to end across a high-volume US real-estate document notarization platform over 3.5 years, spanning .NET Framework MVC, a .NET 8 API rewrite, and Vue.js / DevExtreme front-ends.
Technology	C#, JavaScript, .NET Framework MVC, .NET 8 API, Vue.js, DevExtreme, Azure Cloud, Visual Studio 2022, GitLab

Project	B2B Microservices Data & Operations Application (NDA)
Company	FPT Software
Position	Software Engineer
Team size	13
Duration	10 months
Description	Built Python / Flask microservices exposing RESTful APIs for third-party company-data collection and internal business operations, containerized with Docker; integrated PayPal REST APIs for payment flows.
Technology	Python, Flask, RESTful API, Microservices, Docker, PayPal REST APIs, SSMS, Visual Studio 2019, GitLab

Project	Company Branch & Organization Management (Internal)
Company	Ugotechs
Position	Software Engineer
Team size	3
Duration	3 months
Description	An internal system for managing company branches and organizational structure.
Technology	C#, .NET Framework MVC, SQL Server (SSMS), Visual Studio 2019, GitLab, Windows Server

Project	COVID-19 Notification & Information App (NDA)
Company	Ugotechs
Position	Software Engineer
Team size	10
Duration	8 months
Description	A mobile application to notify users exposed to COVID-19 and share COVID-related information.
Technology	C#, Xamarin.Android, .NET Framework 4.8, SSMS, Visual Studio 2019, GitLab
